

# ANIHEATER

The Original Heater

- ✓ **Uniform heat distribution in the piglet pen**
- ✓ **Higher average temperature in the pen the first few days of life – more viable piglets**
- ✓ **Lower humidity – decreases the growth of bacteria**
- ✓ **No light in the pen at night with radiant heat – increases the use of the pen which reduces the risk of hypothermia and death**
- ✓ **Double bottom model reduces heat loss from the back – more energy is converted into heat**
- ✓ **Can easily be pressure washed after each litter**
